Document Version:

Publisher's PDF, also known as Version of record

Please check the document version of this publication:

- A submitted manuscript is the version of the article upon submission and before peer-review. There can be important differences between the submitted version and the official published version of record. People interested in the research are advised to contact the author for the final version of the publication, or visit the DOI to the publisher's website.
- The final author version and the galley proof are versions of the publication after peer review.
- The final published version features the final layout of the paper including the volume, issue and page numbers.

Lipid droplet coat proteins, skeletal muscle lipid metabolism & insulin sensitivity

1. Augmenting intramyocellular neutral lipid storage capacity protects against insulin resistance in conditions of increased lipid supply. *(this thesis)*
2. The lipid droplet coat protein perilipin 2 is essential for intramyocellular triacylglycerol storage. *(this thesis)*
3. Perilipin 5 overexpression mimics the effects of endurance exercise-training with respect to intramyocellular neutral lipid accumulation and improved fat-oxidative capacity. *(this thesis)*
4. Reduced incorporation of fatty acids into triacylglycerol is an inherent characteristic of the type 2 diabetic muscle cell *(this thesis)*
5. It is important to clarify the definition of metabolism as it becomes increasingly recognized as an underlying mechanism in a range of diseases. *(Lazar MA & Birnbaum MJ, Science 2012; 336:1651-1652)*
6. Interdisciplinary research combining whole genome association studies with high throughput experiments involving loss- and gain of function models to study functional implications will aid in identifying true gene clusters and gene-environment interactions associated with diabetes risk.
7. The whole story of the evolution of taste is really the evolution of loss of taste. *(Callaway E, Nature 2012; 486:S16-S17)*
8. Verdere bezuinigingen op de wetenschap zullen leiden tot minder vernieuwing en innovatie en een vergrijzing van de wetenschap.
9. Environmental approaches for disease prevention are more cost-effective than nonclinical person-directed and clinical interventions *(Based on Chokshi DA & Farley TA, N Engl J Med 2012; 367:295-297)*. Therefore, facilitating and stimulating physical activity and yearly national obesity awareness campaigns will improve global health and save health care costs.
10. Wetenschap is als het beoefenen van topsport: doorzettingsvermogen, het durven nemen van risico's en het juiste (coach)team om je heen zijn de sleutel tot succes.
11. Passion and enthusiasm make things possible, not easy. *(Paulo Coelho)*
